

US Beltie News

President Greg Hipple

We have had spring-like weather teasing us in the Midwest this past week. However, with the return to reality with winter conditions, "spring" calving has begun at Sutliff Belties.

I have raised cattle all my life, or at least since getting my first feeder calves when I was in the 6th grade, yet I still find the start of calving season exciting and full of anxiety. How will the first time heifers do? Will there be any abnormal presentations? Can I save them all and finally have a 100% calf crop? I like to think I have learned from my past mistakes and I am becoming wiser. But agriculture and raising cattle have a way of bringing me back to reality in a hurry. There is little doubt that I will not become wealthy raising cattle and farming, but I certainly feel rich at certain times of the year. Calving season is definitely one of those times.

We are finalizing the plans for our trip to Fryeburg, Maine for the National Belted Galloway Sale and the Spring Council Meeting that is held there every three years. The members of the New England Galloway Group that have extended their hospitality to this Iowa farm boy and his wife (who have never been to New England) have been most humbling to us. I have often wondered if breeders of other breeds of cattle are as kind and compassionate to their fellow breeders as I have experienced during my privileged opportunity to serve as a member of Council and as an officer. I am confident in stating that with very few exceptions, you are members of one of the finest cattle breed associations in existence.

To those members of the committees that have been hard at work in debate, doing research, or preparing reports and recommendations for the Spring Council meeting, please accept our sincere appreciation for your service. Together, we can make things better for all of us and our chosen breed of cattle. Welcome to spring!

Chatfield Scholarship Reminder

The 2017 A. H. Chatfield, Jr., Memorial Scholarship applications are available. Three \$1000 scholarships are awarded annually. Forms may be requested from Executive Director, Victor Eggleston, Phone (608) 220-1091; email: executivedirector@beltie.org. Completed applications must be and must be post-marked by April 30, 2017.

About Classifieds

- ◆ **Your classified's required contact information — name, farm, location, phone and email.** All classified ads are automatically placed on beltie.org with a two-month limit on classified insertions. Photos are \$10 placed on beltie.org only.
- ◆ Email ads to executivedirector@beltie.org or by fax (608) 527-4811 or phone (608) 220-1091. We encourage members to submit ads the last two weeks of the month.
- ◆ **About bulls ...** Before advertising a young male be sure he is well conformed, tracks properly, has good legs and feet, and exhibits good weight gains. We should have data available on his birth weight, 205-day weaning weight, and yearling weight. If he's reached breeding age (around 18 months), it's definitely a plus to have his semen checked for quantity and motility, and uniform scrotal development (two normal sized testicles). Any data available should appear in your advertisement along with his birth date and the names of his sire and dam. **It is required that registration numbers be included on bulls advertised for sale in the classifieds.**

News from Napa, California

Stewart Ranch, Napa, California recently showed their heifer, Snapchat at MJC Cattle Classic, a club calf jackpot show in California. They showed Snapchat in a commercial class by weight.

Owner Ailene Pritchett Tarap communicated that she won her class of ten heifers with judge Miles Toenyes of Illinois commenting, "This is by far the best Belted Galloway I have ever seen." The next day Toenyes posted about the heifer on Instagram.

Snapchat was also shown at their local fair and was judged by Ryan Rash of Texas. He awarded her Champion Heifer and stated, "This heifer is the Queen of the Nile and Snapchat worthy!" Ailene told us, "Belties can compete against these other breeds. It just takes that special one!"

Calendar Reminders

2017 Belted Galloway Spring Council Meeting

April 21, 2017. Fryeburg Fairgrounds, Fryeburg, Maine. Meeting at 8:30 am. Contact Vic Eggleston (608) 220-1091 or executivedirector@beltie.org.

2017 National Belted Galloway Sale — The Fryeburg Youth Show

April 20-23, 2017. Fryeburg Fairgrounds, Fryeburg, Maine. Sale at 1 pm on the April 22nd. Contact Scot Adams (207) 696-3812 or mnshad-owfarm@gmail.com.

27th National Belted Galloway Sale

APRIL 22, 2017 ~ FRYEBURG FAIRGROUNDS, FRYEBURG, MAINE

3RD ANNUAL NORTHEAST JUNIOR NATIONAL BELTED GALLOWAY SHOW

Dustin James NEGG

The New England Galloway Group is proud to be hosting the 27th National Belted Galloway Sale and the 3rd annual Northeast Regional Belted Galloway Junior National Show held in conjunction with the Fryeburg Youth Show.

The National Belted Galloway Sale will be held on **Saturday, April 22, 2017 at 1 pm EST**. Please be sure to mark your calendars. We assure you that this is not a sale that you will want to miss because we will be selling some of the most unique and high quality lots in the history of our sale.

The sale will be broadcast live on the internet via DVAuction.com to allow breeders both near and far to participate. The sale catalog will be posted on beltie.org and newenglandgallowaygroup.com. We also encourage those of you active on social media to follow the event on the NEGG's Facebook

page. As a reminder, in order to use www.DVAuction.com to bid, you must preregister to obtain a buyer number. Step-by-step directions are listed on their website and in the sale catalog.

In conjunction with the Fryeburg Youth Show, the Northeast Regional Belted Galloway Junior National will include photo, marketing, and cooking competitions. Junior exhibitors wishing to participate in these contests are urged to visit the webpage fryeburgyouthshow.com for the most up-to-date information and downloadable entry forms. This event continues to be one of the top in the Northeast region. We are truly lucky to have this event in conjunction with our sale.

We look forward to seeing you all in the spring! Should you have any questions or need more information, please email info@newenglandgallowaygroup.com or contact Sale Manager, Scot Adams at (207) 696-3812.

Parentage Testing

Megan Rolf PhD, Kansas State University

Breed registries today rely on DNA testing to verify parentage in an animal's pedigree. Every animal has a genetic code in every cell of the body. Several billion chemical sub-units of a material called deoxyribonucleic acid (DNA) constitute the long, threadlike chromosomes (and the genes on those chromosomes) that exist in the nucleus of every cell. The genetic code for every aspect of that individual can thus be found in any body cell, whether blood, bone, hair or muscle. Since the genetic code of an individual animal is present in every body cell, a tiny portion of that animal can be utilized to verify its identity. Samples of blood or hair (containing the hair roots) are the most commonly used portions that are sent to a lab to analyze for identifying that animal. DNA testing is now the standard tool for parentage verification and/or individual identity testing for all species. (Heather Smith Thomas)

Parentage testing not only ensures correct pedigree, but can provide information to make important management decisions for commercial producers. Knowing some of the basics of parentage testing and how it works can help a producer understand the benefits of testing.

While the need to verify parentage for embryo calves may be obvious, the benefits of parentage testing outside of this unique situation might not seem quite so obvious. Take a producer who runs multiple bulls in one pasture. Although all sires may have acceptable calving ease, there may be some calving difficulty. Knowing the most likely sire of each calf allows producers to make more informed decisions relative to future grouping of bull batteries based on calf performance including potential calving difficulties. Additionally, producers using AI followed by natural service sires may have some calves with birth dates that are too ambiguous to determine the sire, and the only way to determine this correctly is by using parentage testing. This knowledge aids commercial producers who wish to retain only AI sired heifers as replacements or seedstock producers who rely on accurate pedigree information.

The concept behind using genetic markers for parentage testing is based on the fact that each animal receives one copy of each gene, called an allele, from each parent. We can genotype an animal to determine what markers they have and compare that to potential parents to determine if those markers are consistent with that individual being a parent of the offspring in question. One common misconception of parentage testing is that the test confirms parentage absolutely based on matching DNA of offspring to their parents. Rather, parent-

age testing is about excluding animals that cannot be the parents of a particular offspring, rather than proving that an animal is the parent. In the simplest terms, we use the genetic markers to exclude animals as a possible parent, leaving those remaining (hopefully only one) as the most likely parent for that offspring. To illustrate this concept, let's look at an example.

There are three potential sires for a calf with a known dam. For this example, we will be using five different genetic markers, in this case A through E, which we hope will be enough to exclude all but one of the possible sires. We will genotype the calf, the dam, and each of the three possible sires on a parentage panel where each genetic marker can have two possible alleles (a capital or lowercase letter) and three possible genotypes (two capital letters, two lowercase letters, or one of each). The results are shown in the table below (check marks indicate consistent inheritance).

In order to determine whether we can exclude one of the sires, let's start with locus A. If you'll recall, animals get one allele (genetic marker) from each parent, so the first thing to do is to figure out which allele the calf possesses came from the dam. At locus A, the calf's genotype is Aa and the dam's is AA. Because the dam can only provide an A allele regardless of which chromosome she passes on, the calf's A (pronounced big A or capital A) had to have come from the dam, which means that the a (pronounce little a or lowercase a) came from the sire. If we look at the three sire genotypes at locus A, each one has at least one a allele. Any one of them could have been the potential sire so we cannot exclude them. Now let's look at locus B. The calf is BB, and the dam is Bb, so she had to have passed on her B allele to her calf. So the other B allele came from the sire. Sire One and Sire Two both have B alleles, but Sire Three does not. We can exclude Sire Three as the possible sire of this calf.

If we continue this process for all five loci, we can see that the C locus does not let us exclude any possible sires because they all have c alleles and the E locus is also uninformative for this parentage test. However, if we look at locus D, we can see that the dam passed on a d, so the calf's d allele came from his sire. The only bull with a d allele is Sire

Two, so Sire Three (which was already excluded at locus B) and Sire One can be eliminated, and we could conclude that the most likely sire of the calf is Sire Two.

***The Belted Galloway So-*

cietiy utilizes UC Davis for all DNA and parentage verification. UC Davis uses microsatellite technology to analyze Belted Galloway DNA. Performance traits offered by the SNP test are not accurate for Belted Galloway cattle because they are based on Angus genetics.

Table 1. Example of SNP parentage testing with five loci.

	Locus A	Locus B	Locus C	Locus D	Locus E
Calf	Aa	BB	cc	Dd	ee
Dam	AA	Bb	cc	DD	ee
Sire 1	Aa ✓	BB ✓	Cc ✓	DD	ee ✓
Sire 2	Aa ✓	Bb ✓	Cc ✓	dd ✓	ee ✓
Sire 3	aa ✓	bb	Cc ✓	DD	ee ✓

NEW YORK. Four registered young bulls and two registered yearling heifers for sale. All six Belties are grass fed and sired by Seefeld Blackberry (AI) 35584-B whose sire is Mochrum Huckleberry (Red)(GBA) 3557-. They are as follows: Barrister St. John's Wort 40451-B. DOB: 5/25/16. Dam: Barrister Margaret 34709B. Barrister Sweet William 40452-B. DOB: 5/26/16. Dam: Barrister Renee 36371-B. Barrister Jacob's Ladder 40453-B. DOB: 5/19/16. Dam: Barrister Ashley #36372-B.W. Barrister Bishop's Cap 40454-B. DOB: 5/20/16. Dam: Ticapa Willow #32161-B. All four bulls have near matching belts – not too wide, not too narrow. Four bulls in one year is more than we need and can handle as we have limited space available. Two registered yearling heifers: Barrister Lady's Slipper 39229-B. DOB: 5/10/15. Dam: Barrister Margaret 34709-B. Barrister Poppy #39230-B. DOB: 5/28/15. Dam: Ticapa Willow #32161-B. Contact Carol Kellish, Barrister Brand, Lafayette, NY. (315) 677-3332 or TomKellish@aol.com.

INDIANA. Two bulls for sale or possible trade. Beechwood Dylan, 39540-B. DOB 11/20/07. A very tame, good looking, older bull who carries the red gene from grandsire, Starlite Redman 5257-R, and his dam, Driftwood Rosemary 25326-R. Isadore Dartanian 39540-B, DOB 6/21/15, is a young bull out of the above bull and dam White-O-Morn Tulip 27774-B. Good conformation, nice belt, not yet in service, but I would guarantee him. I am in southeast Indiana approximately an hour from Indianapolis, Cincinnati and Louisville. Contact Dave Husted, Isadore Valley Farm, Osgood, IN. (317) 372-4948 or hustedd2@gmail.com.

INDIANA. Indiana/Michigan your bull is needed to lease or purchase. We are looking for a registered bull to settle five cows and two heifers. We are located in northwest Indiana which is 90 miles from Chicago or 20 Miles from South Bend, Indiana. Bull will be in the sacrifice lot till mid-April then on full pasture. Please email hindesfarm@comcast.net with pedigree information, availability, cost and transportation costs. Tim & MaryKay Hindes, Saugany Lake Farm, Rolling Prairie, IN. (219) 306-1761.
